

Assignment 1: Ensure the script checks if a specific file (e.g., myfile.txt) exists in the current directory. If it exists, print "File exists", otherwise print "File not found".

To check whether file exist or not in shell scripting use “-e”

```
read -p "enter file name:" filename
```

```
if [ -e $filename ]
```

```
then
```

```
    echo "file exist"
```

```
else
```

```
    echo "file not found"
```

```
fi
```

-e is used to check if file exists if it is true even if file is a directory but exists
